DETAILED ACTION

Allowable Subject Matter

1. Claims 1-7 and 9-11 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Publication 2003/0066893 to Yap et al. is the reference closest to the claimed invention. Yap et al. disclose method for testing an appliance having a smart card reader, said method comprising steps of: receiving a test adapter into said smart card reader for testing said appliance, said test adapter having plurality of contacts that connect to a corresponding plurality of contacts of said smart card reader, and using a contact of the smart card reader as a serial interface for testing of the appliance, which is not used by the appliance during operation with a smart card, wherein one of the smart card contacts used for testing of the appliance is the smart card contact for the programming voltage. However, Yap et al. do not teach providing a reset signal for an activation of a smart card; beginning a test mode initialization for testing said appliance via said test adapter if a response to said reset signal is negative; and using a first one of said contacts of said smart card reader as a serial interface for transmitting signals in accordance with an RS232 standard to test said appliance, wherein said first contact of said smart card reader is not used by said appliance during an operation with said smart card and is a smart card contact for a programming voltage; and including all of the other limitations in the respective independent claims.
